DOING MORE WITH SPEECH

HOW SPEECHREPORT HELPS YOUR A & E PATIENTS

A clinician utilises speech recognition via SpeechReport Cursor and Structured Reporting to input data, while being with a patient.

When the patient is ready to be discharged the e-discharge report is pre-populated with available data before this episode of care from the PAS, EPR, pharmacy, pathology, radiology or any other integrated system.

Clinicians only have to complete the remaining fields or review the report. The completion time decreases and the quality of the report improves as the administration is done at the point of treatment. Clinicians complete a clinically coded structured report that is in line with PRSB standards.

Once the document is finalised, the report will be distributed through an agreed set of channels such as inputting into the EPR, an outsourced print provider, the patient, the GP via Transfer of Care or indeed as part of an inpatient transfer.

In accordance to Transfer of Care requirements within the NHS contract the data will also be send via structured messaging to other clinical providers.

Along with these efficiencies in the flow our analytics solution shows real time data as to where delays have occurred in the reporting process. This can contribute to Delays in Transfer of Care (DToC) and point out how these can be addressed within an organisation.

The analytics package can also be used to support with national submission to show compliance to the national contracts and move forward with the NHS paperless 2020 initiative.

ADVANTAGES

- Use speech recognition in a sterile environment while completing documentation

- Meet national contractual standards for Transfer of Care

- Diminish delays in Transfer of Care and reduce turnaround times for discharge notifications by streaming the documentation within the patient flow

- Have SNOMED CT coded terms available within clinical systems immediately

- Clinicians outside the Trust have access to a patient's episode of care

- Track and report on key performance indicators to continue improving on efficiency.

SPEECHREPORT

The SpeechReport platform provides a fully automated workflow with advanced speech recognition technology. SpeechReport helps to streamline correspondence processes. The solution allows your organisation to create, correct and manage all of your documentation in one central location.

SpeechReport enhances the quality of the report and ultimately improves patient care by providing efficient and accurate correspondence.

For a free demo of this innovative platform please get in touch with one of our friendly and knowledgeable team: +44 (0)208 555 9041 or email: marketing@g2speech.com

ABOUT G2 SPEECH

G2 Speech was founded in 1998, since then we have polished and perfected the art of providing digital dictation, speech recognition and workflow management solutions. We successfully provide our products in the UK, Ireland, the Netherlands, France, Belgium and Luxembourg. Within the UK we currently deliver solutions to over 35 major NHS Trusts.
