

## Return on investment

---

**G2 Speech attunes digital dictation, speech recognition, medical processes and integrates them with any third party information system. As the organizer in speech technology we offer you integrated solutions which enable you to do more in less time. From recent studies we learned that our clients save as much as 60% on throughput time and 40% on full time equivalents. Here you can read experiences from our customers**

---

### **Doctor Franssens, Radiologist Sint Dimpna General Hospital Geel, Belgium.**

Doctor Franssens is extremely satisfied with MediSpeech. "Previously, people would go home on a Monday evening leaving a backlog of 100 reports that had built up over the weekend. Nowadays, since the implementation of MediSpeech all of the reports from the weekend will have been dealt with by early Monday afternoon. Given that 250 reports are normally processed per day, this makes quite a considerable difference."

---

### **Doctor Coolens, Radiologist Heilig-hart clinic Eeklo, Belgium**

Doctor Coolens uses MediSpeech in the radiology department of the Heilig-hart clinic in Eeklo. He was pleased to find that there is no more physical transport of tapes, and it is no longer necessary to search through cassettes to get the report needed. "What's more, this product works well: the recognition factor is high and the product is easy to use." Currently there is no PACS system available, but if one becomes available, MediSpeech can be integrated into it. When that happens, the benefits of MediSpeech system will be even greater.

Doctor H. Rigauts, Radiologist

### **Doctor Hans Rigauts, Radiologist Sint-Jan hospital Bruges, Belgium.**

At the Sint-Jan hospital in Bruges Doctor Rigauts had decided to change over from VS4000 to MediSpeech. The 135,000 reports which are dictated there per year, are now converted by MediSpeech into text. Typing is no longer necessary, only sometimes the reports do need a bit of correcting. This means that the backlog has been drastically reduced and that secretaries have more time available to devote to other activities.

---

### **Doctor Pilate, Radiologist A.V. Dodoensziekenhuis Mechelen, Belgium**

Along with his two colleagues, Doctor Pilate deals with about 25,000 dictations per year, which they not only dictate themselves but also process. Because they do all of it themselves, no typists are required, the throughput time is nil and there is also no backlog. The greatest advantage is that no typing is required, and only minimal corrections need to be made to the text which has already been recognised by MediSpeech.

---

**Doctor van den Berghe, Pathologist  
Sint-Jan teaching hospital  
Bruges, Belgium**

Working with MediSpeech suits Doctor van den Berghe very well. "It not only considerably shortens the whole process of making case reports, but also makes it easy to process a dictation yourself. When something needs to be completed immediately, you can do it on the spot. This is of great benefit in urgent cases, but also a great help at weekends, or even during the week, particularly after 5 pm when the typing pool is closed."

---

**Doctor Pouillon, Radiologist  
St. Augustinus hospital  
Wilrijk, Belgium**

Doctor Mark Pouillon, radiologist at the Sint-Augustinus teaching hospital in Wilrijk is very positive about MediSpeech: "The reports are now dealt with much more quickly. In view of the fact that the number of case reports is increasing by about 5% a year MediSpeech is a great solution; there is no need for example to search for dictations on a tape. Thanks to the digital reports, it is now easy to respond quickly and adequately."

---

**Doctor Cassiman, Radiologist  
OLV hospital  
Asse, Belgium**

Doctor Cassiman is very happy with MediSpeech. He has been working with the product for a number of years and would not want to be without it. "Working with MediSpeech is considerably more efficient, consequently more time is freed up for other tasks. Another advantage is that with MediSpeech you can add extra comments to a dictation, so that it is possible, after further consultation for example, to add these extra findings to a dictation."
