SPEECHREPORT 2.23
PROVIDING HIGH QUALITY SOLUTIONS

This document covers the highlights of the SpeechReport 2.23 release. We would like to introduce the new functionalities and latest improvements to our software, in order to provide our customers with high quality solutions to optimise their workflow and reporting processes.

RELEASE SUMMARY

The SpeechReport 2.23 release includes the following new functionalities:

Interaction Service

■ A new front-end Interaction Service allows third party partners to embed SpeechReport's functionalities into their own system and workflows.

Confidentiality of documents

■ Document confidentiality can now easily be managed on a document or department level.

G2 Mobile

■ The mobile end point, the layer facilitating the communication between SpeechReport and the G2 Mobile apps is improved.

Editor functionalities

■ The most requested MS Word functionalities to edit the layout of documents are introduced to SpeechReport's editor.

Template creation

■ From now on it's possible to easily create and manage templates in the Admin Module itself.

History of documents

■ Additional options to retrieve document information have been added to provide a short overview of all documents ever created, including information on deleted documents.

Feedback during log on

■ An animated splash screen now appears to inform users that SpeechReport is starting.

Medication Module

■ A role based right is introduced to enable or disable the authorisation to change medication.

■ Clinicians are now able to select how the medication should be supplied to the patient.

FUNCTIONALITIES

G2 SPEECH
DOING MORE WITH SPEECH

FRONT-END INTERACTION SERVICE

We have developed an Interaction Service with front-end integration. This integration enables third party integrators to use SpeechReport from their own worklist, for example a dictation, transcription or authorisation worklist. Users will have access to all SpeechReport functionalities for creating and editing documents whilst accessing a partners' workflow to track the document throughout its lifetime.

The Interaction Service can also be used as a traditional front-end integration where the third-party integrator only activates SpeechReport to create or open a document. The workflow, including worklists, are in this case managed in SpeechReport.

The third party integrator decides which scenario is the best fit for their customers and their workflow needs.

This functionality has been named the 'Front-end Interaction Service' as SpeechReport and the third party integrator's application are both communicating on the workstation of a user and not via a back-end server infrastructure.

Besides this front-end Interaction Service, a separate functionality named 'Worklist Interaction Services' allows third parties to create their own worklist for their users, extracting the required document information from SpeechReport.

CONFIDENTIALITY OF DOCUMENTS

Having documents handled as confidential is an important requirement nowadays. Normally, all reports related to a specific patient can be found in the patient history. However, in certain cases, you do not always want this information to be exposed to other departments to protect a patient's privacy.

Therefor we have introduced the possibility to easily configure the document's confidentiality per (sub)department or even per document.

- Per (sub)department: E.g. all documents created in the Sexual Health Department are confidential by default and can't be seen in the patient history by anyone outside of the Sexual Health Department.

- Per document: Specific documents of a patient contain confidential information and can therefore individually be marked as confidential.

G2 MOBILE

G2 Mobile consists of an dictation and a sign off application for Android and iOS. These can be installed via the Google Play Store and the Apple App Store. To facilitate the apps to communicate with SpeechReport the mobile endpoint needs to be installed onsite. This mobile endpoint is now improved. As it works more efficient alongside the apps and SpeechReport, it's performance and general stability has improved.

EDITOR FUNCTIONALITIES

Our customers are very much used to MS Word and expect similar functionality in SpeechReport's editor. Therefore, we have gathered the most requested functionalities and added these to SpeechReport's editor in the client.

These functionalities include:

- Date formatting
- Bullet points
- Line and page breaks
- Indents and spaces
- Text alignment
- Sub/superscript
- Change case (capital to small letters and vice versa).

TEMPLATE CREATION

From now on it's possible to easily create and manage templates in the Admin Module itself.

This user friendly functionality enables administrators to add jump points, select document variables from a list and insert pictures directly in the Administration Module.

FUNCTIONALITIES

G2 SPEECH
DOING MORE WITH SPEECH

HISTORY OF DOCUMENTS

The Administration Module offers the possibility to retrieve information related to the state of documents.

- The Document Manager provides a list of all documents in the current workflow based on the given search criteria

- The audit trail can be used for more detailed information on the different stages a document has gone through.

Based on customer request we have now added some additional options to retrieve document information.

The new feature 'link history' in the Document Manager provides a short overview of all documents ever created related to a specific identifier, including information on deleted documents.

FEEDBACK DURING LOG ON

Users have reported that the system appears unresponsive during log on. This was reported for both normal log on and log on via Administration Module.

An animated splash screen now appears to inform users that SpeechReport is starting. Once the user's credentials have been supplied, another screen appears until the client platform is presented.

MEDICATION MODULE

With the introduction of the Medication Module in the previous release users are able to manage medication prescriptions from the SpeechReport platform.

In short, this module enables clinicians to easily include the medication into the reports and work together with pharmacies.

We have now added some new features to this module:

- Not all users are authorised to change medication in the Medication Module. Therefore, a role based right is introduced to enable or disable this.

- Clinicians are now able to select how the medication should be supplied to the patient. To define these supply dispensary options a registration entry in the Administration Module has been added. A set of existing dispensary options is already available and new dispensary options can be created.

If you want to learn more about our latest software innovations, please get in touch with your account manager who will provide you with a full update.

SPEECH REPORT

G2 SPEECH
DOING MORE WITH SPEECH

SPEECHREPORT

Our entreprise platform SpeechReport provides a fully automated workflow with advanced speech recognition technology. SpeechReport helps to streamline the correspondence processes. The solution supports your organisation to create, correct and manage all of your documentation in one central location.

ABOUT G2 SPEECH

G2 Speech was founded in 1998, since then we have polished and perfected the art of providing digital dictation, speech recognition and workflow management solutions. We successfully provide our products in the UK, Ireland, the Netherlands, France, Belgium and Luxembourg.
