

## MATER PRIVATE HOSPITAL

**Mater Private Hospital in Dublin, Ireland is part of the Mater Private Group that provides private healthcare in Dublin, Cork, Limerick and Liverpool. The Group prides itself on providing some of the most technologically advanced treatment options in the country and has pioneered many major developments in the delivery of healthcare in Ireland.**

**Therese O'Sullivan is the Pathology Laboratory Manager**

at the hospital and was tasked with the implementation of a speech recognition system across Pathology back in May 2013. At the time, the hospital were using digital dictation and in some places even analogue tapes. It was decided by the Senior Management Team that speech recognition was needed to improve turnaround times, achieve cost savings and manage increasing workloads.

The pathology team at the Mater Private Hospital consist of 18 staff - five

consultants, seven medical scientists and four medical secretaries.

**The Pathology Laboratory at the Mater Private is a multi-disciplinary laboratory that includes:**

- Clinical Biochemistry/ Endocrinology
- Haematology/Coagulation
- Blood Transfusion
- Histopathology
- Immunology
- Microbiology
- Virology

## Therese spoke about her experiences of working on the project...

“I would have to say that if you're considering implementing the software – make sure that you have a dedicated project manager to handle the deployment from start to finish. It was a big undertaking and I learned a lot about different people's areas of work. I wouldn't go back and now people using the solution would be lost without it. I would have liked to have had more time to fully understand the system and its nuances.

It's important to have buy in from your teams and it's important to be proactive and embrace the new technology.

In the first instance, post implementation, we had a temporary reduction in consultants and an increase in workload but managed to keep up with demand. Previously, before using the G2 Speech solution, we were working on around 9,000 cases a year – there are two dictations per case so around 18,000 dictations a year. **Since using the system our workload has increased (with an intake of cases from Cork) to around 12,000 cases a year with two dictations per case which takes us to around 24,000 dictations a year** – we have had some backlogs recently but these are due to the sheer volumes of extra samples, and without the G2 Speech solution, we would have had to employ further staff.

The staff at G2 Speech have been very good and helpful. **I'd recommend the product to other health professionals** but I'd stress the importance of having a dedicated project manager.”

## Therese explained how the recognition just clicked...

“It's like someone flicked a switch. The system just got it and the recognition rates improved significantly. We decided to move to front-end recognition and now there's pretty much no changes required. It made things so much simpler with the use of templates and auto-texts too. As we use a lot of repeated sections of text – this made life much easier. With one simple command, chunks of text would be inserted.”

## Aisling O'Connor – Head of Medical Scientists in Histopathology spoke about her experiences...

“I can remember the times when we used to write up paper templates for each case. We required a 1 WTE person a day just writing. There were spelling issues and bad handwriting issues on top of that too. **Now, with the new software, we do need to think through what you're going to say before the dictation** and remember to speak clearly and concisely but it's much better.”

THE DEPARTMENT ARE NOW TURNING AROUND DOCUMENTS IN **LESS THAN 24 HOURS** EVEN WITH THEIR HUGELY INCREASED WORKLOAD.

## David Mahon, Medical Scientist said...

“I’ve found the system to be very good and helpful to me when creating documentation. **It’s straight forward to use and it picks up what I’m saying very well.**”

### PROJECT REQUIREMENTS

- Increase efficiency
- Cost savings
- Increase in productivity

### PROJECT OUTCOME

- Increase from 18,000 dictations a year to 24,000 dictations a year
- 24 hour turnaround times

## ABOUT G2 SPEECH

G2 Speech has over 20 years' experience developing advanced speech solutions and workflow management. Every single day more than 35,000 users are working with G2 Speech and are benefitting from our technology, by fully automating the workflow process for document creation. Join them and digitise your information to help deliver a paperless NHS and digitise health and social care!
